| | |
|-------------------|---|
| Ingestion | Product is considered to be of low toxicity. Ingestion of large amounts may cause irritation to the oesophagus and cause gastrointestinal upset. |
| Eye | Eye irritation (Draize, rabbit): severely irritating. Vascularisation of the cornea was observed when; undiluted (100%) similar surfactants were applied to the eyes of rabbits. As this is considered a permanent effect, the studies were terminated. The chemicals were considered to be severely irritating to the eye (HERA, 2009). The surfactant in this product is dilute (<20%). |
| Skin | The surfactant contained in this product exhibit low acute dermal toxicity. Low irritation to the skin. However may cause reddening of the skin, rashes or dermatitis on prolonged skin contact. Dermal LD ₅₀ (rabbit): >20g/kg |
| Inhalation | The surfactants in this product have low acute inhalation toxicity. In non-guideline studies reported in HERA (2009) the surfactants contained in this product had a LC ₅₀ values in rats that exceeded the saturated vapour concentration in air. There were no mortalities reported. |
